Automate the process of chatting with the employees and ensure:

Empathetic Responses

Better Understanding of Employees' Issues

FLAG
Report Generation

After chatting with the employees, generate:

Daily Reports

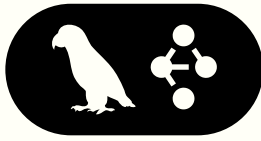

Overall Reports

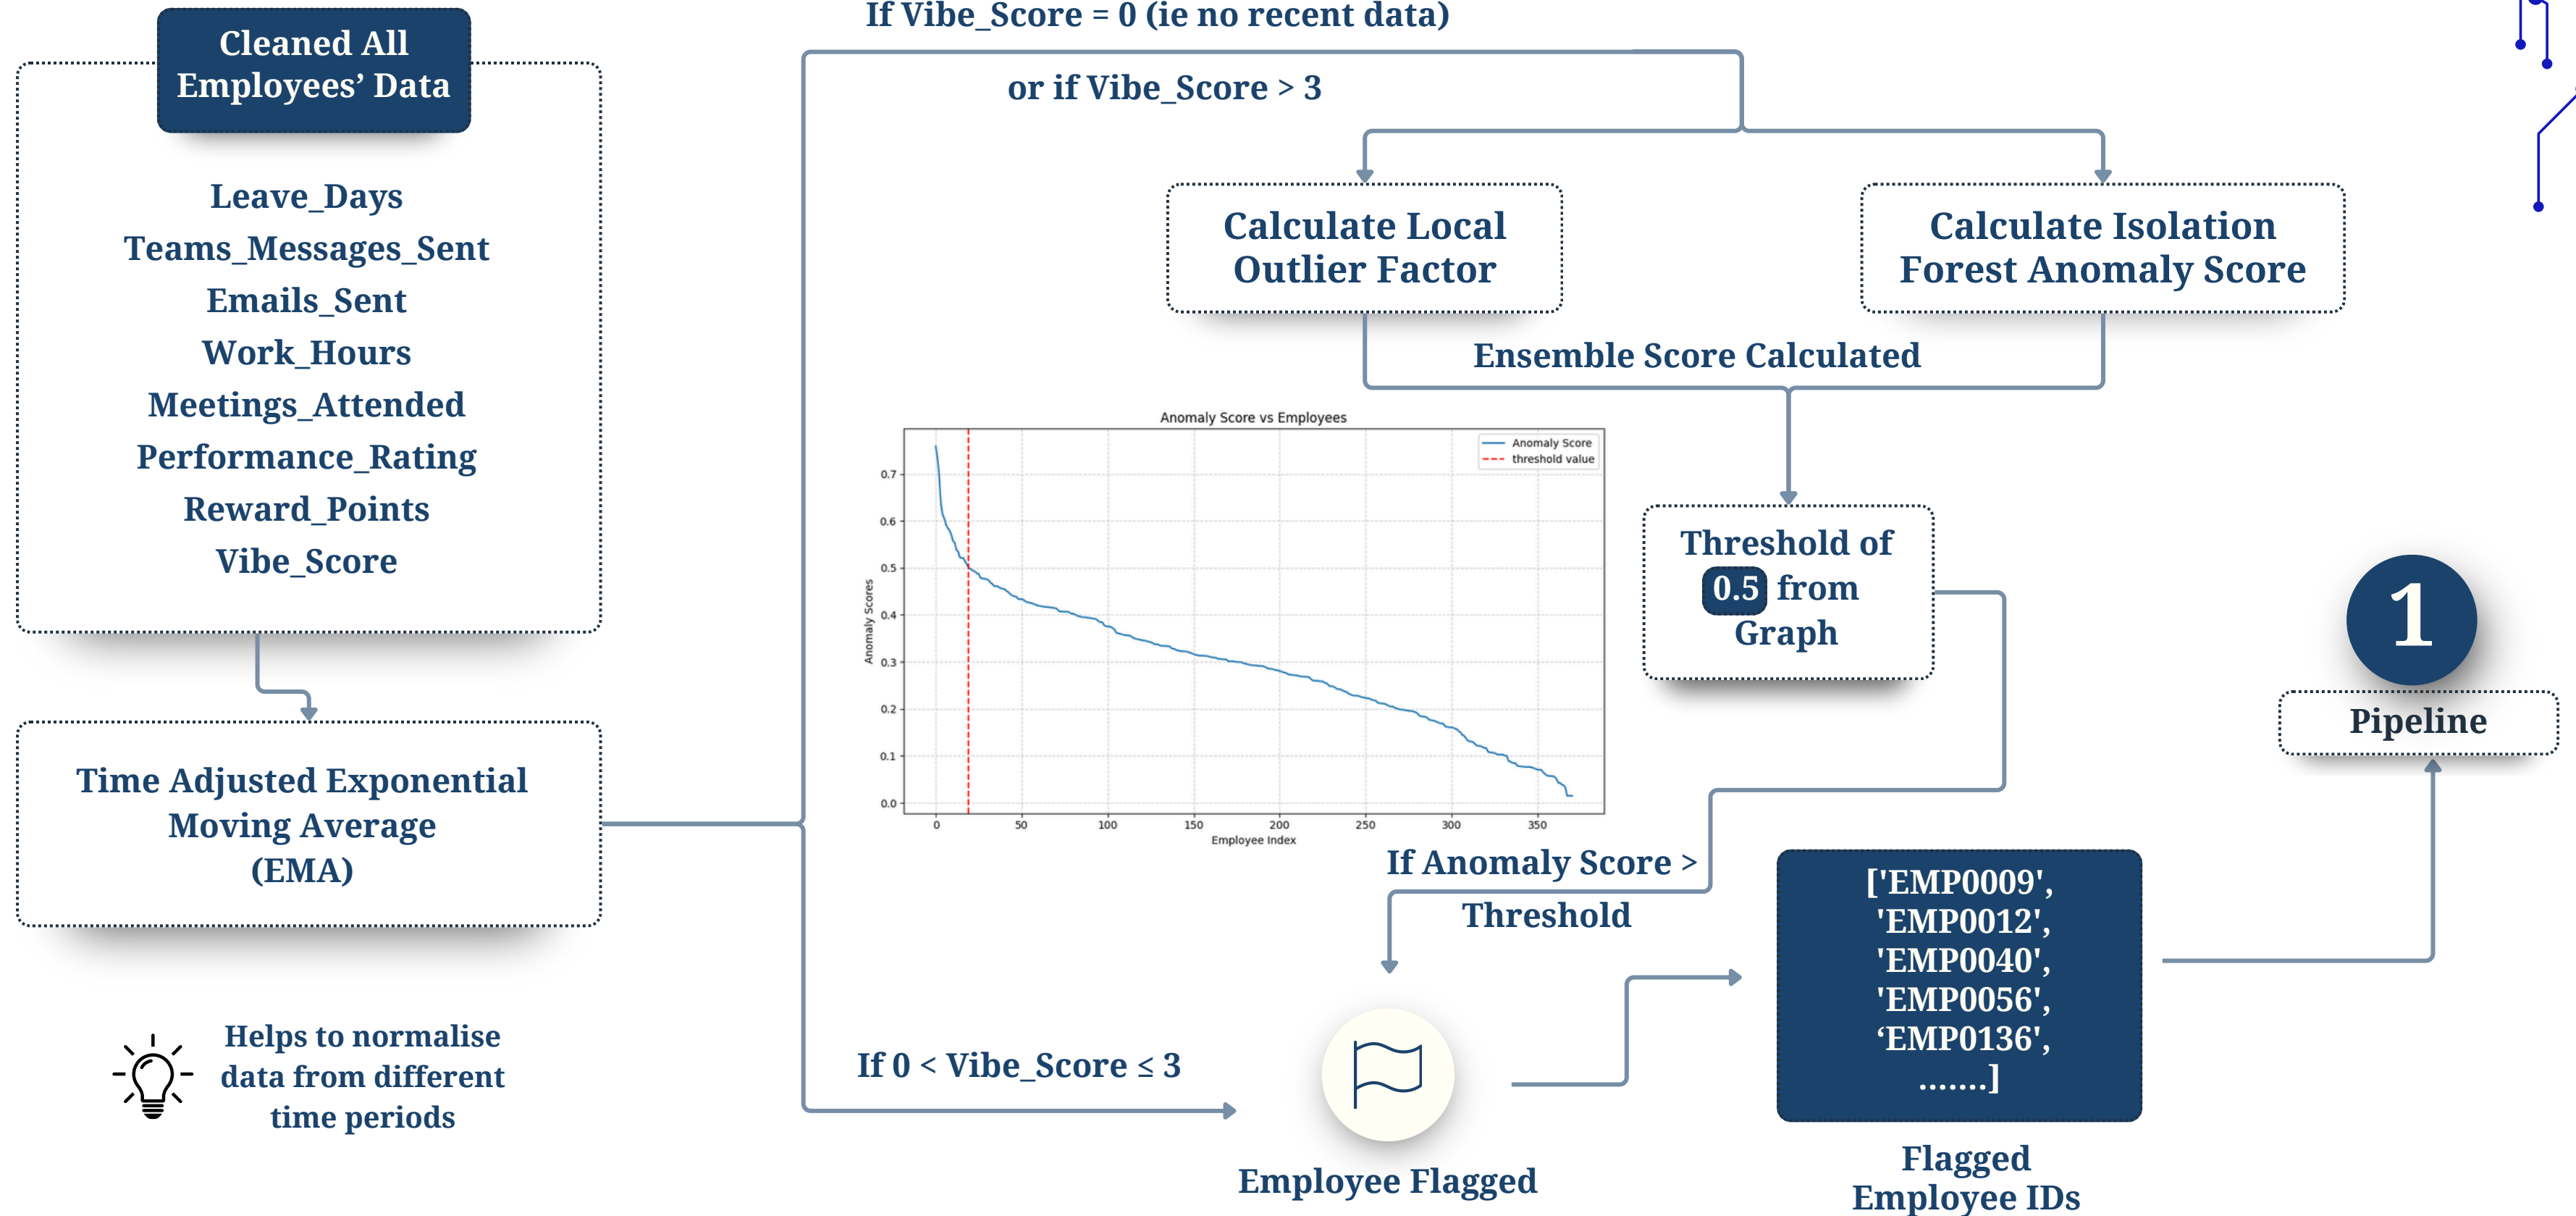

HR Escalation

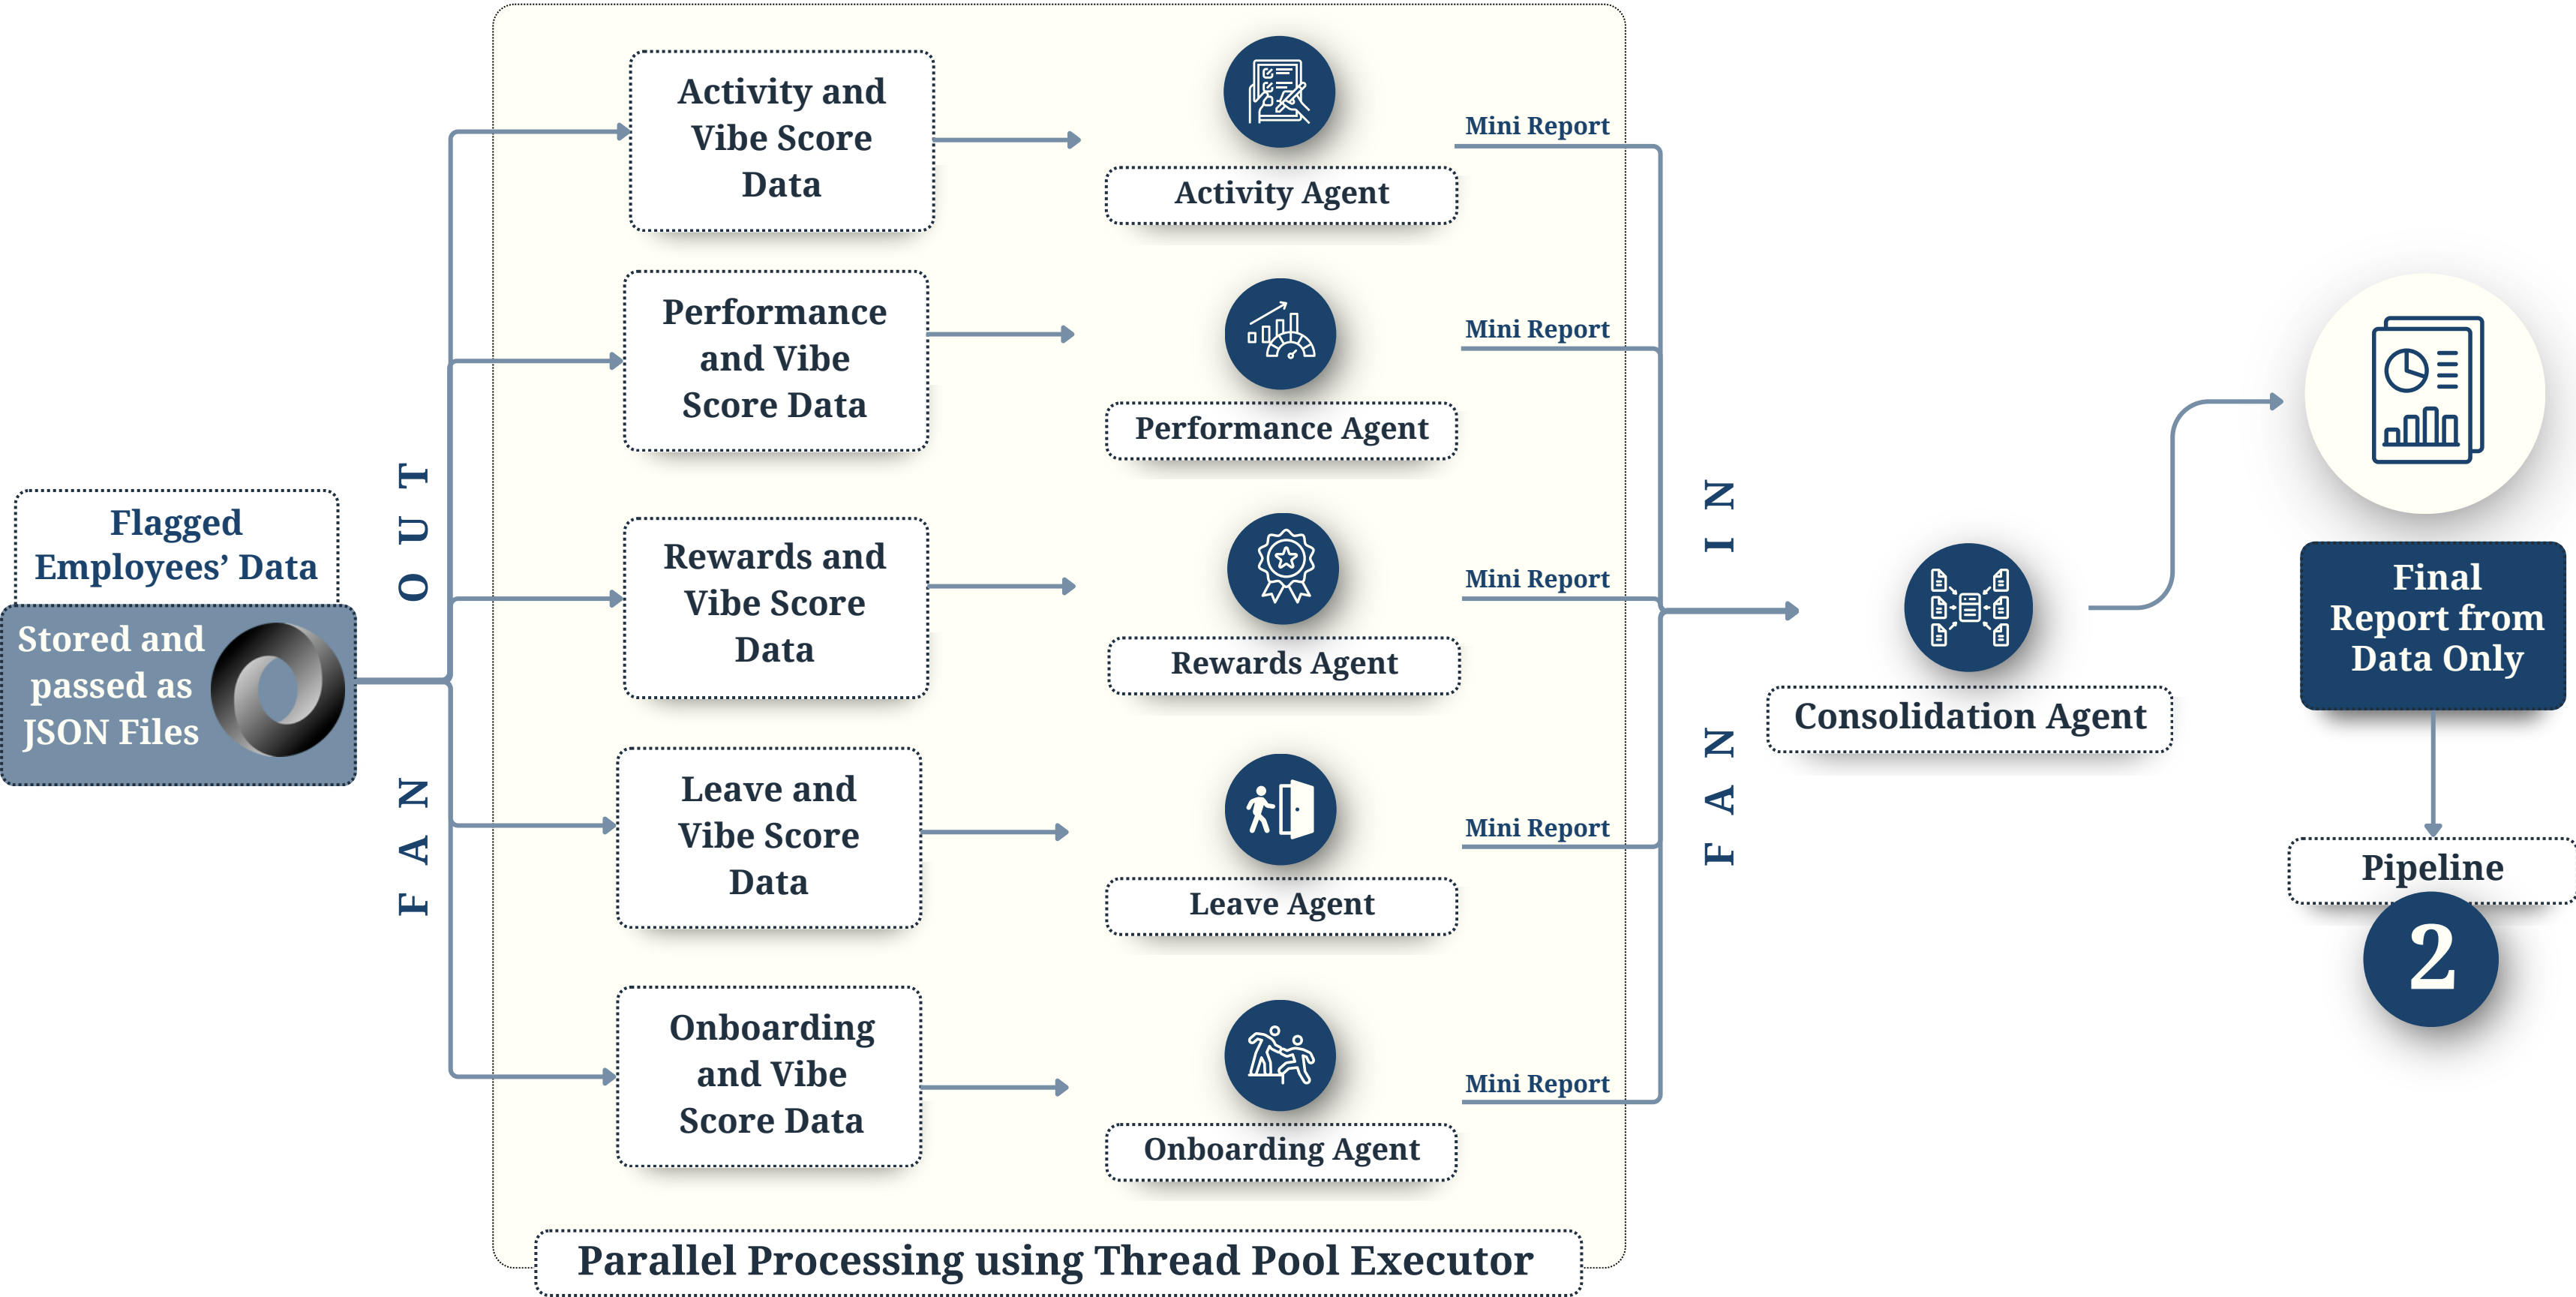

APPROACH

	PIPELINE 0	PIPELINE 1	PIPELINE 2
Purpose	 Select the employees to be sent to the chatbot for counselling	 Detect signs of burnout, disengagement, distress  Consolidate insights from multiple behavioral dimensions	 Detects emotional distress & supports early well-being intervention  Provides therapeutic conversations which are adaptive, not just Q&A
Implementation	 Calculation of Time Based Exponential Moving Average of the features  Selection of employees directly based on the calculated vibe score value  Isolation Forest and Local Outlier Factor for selection of other employees	 Agent-based Architecture  Fan-out/Fan-in Model  LangGraph Orchestration  Few-shot Prompting  Meta-level Consolidation	 RAG system using employee data + therapy prompts  Multi-agent design: Introduction, Context, Next Question, Summary, Reports  Real-time emotional analysis, adaptive flow, and escalation logic  Summarized session reports with key concerns & follow-ups
Tools/Tech Used	 Pandas  Numpy  Scikit - Learn	 LangChain  LangGraph  Pydantic	 GPT-4o-mini  LanceDB  Agno

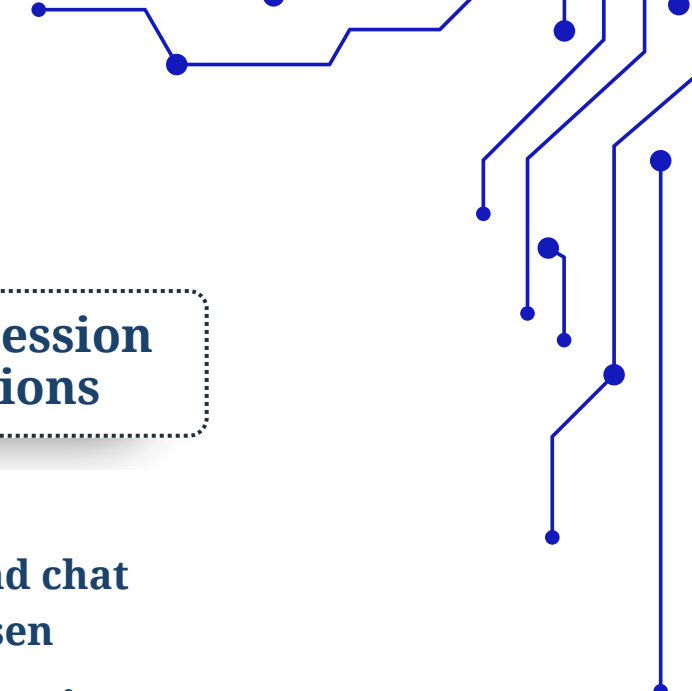

PIPELINE 0

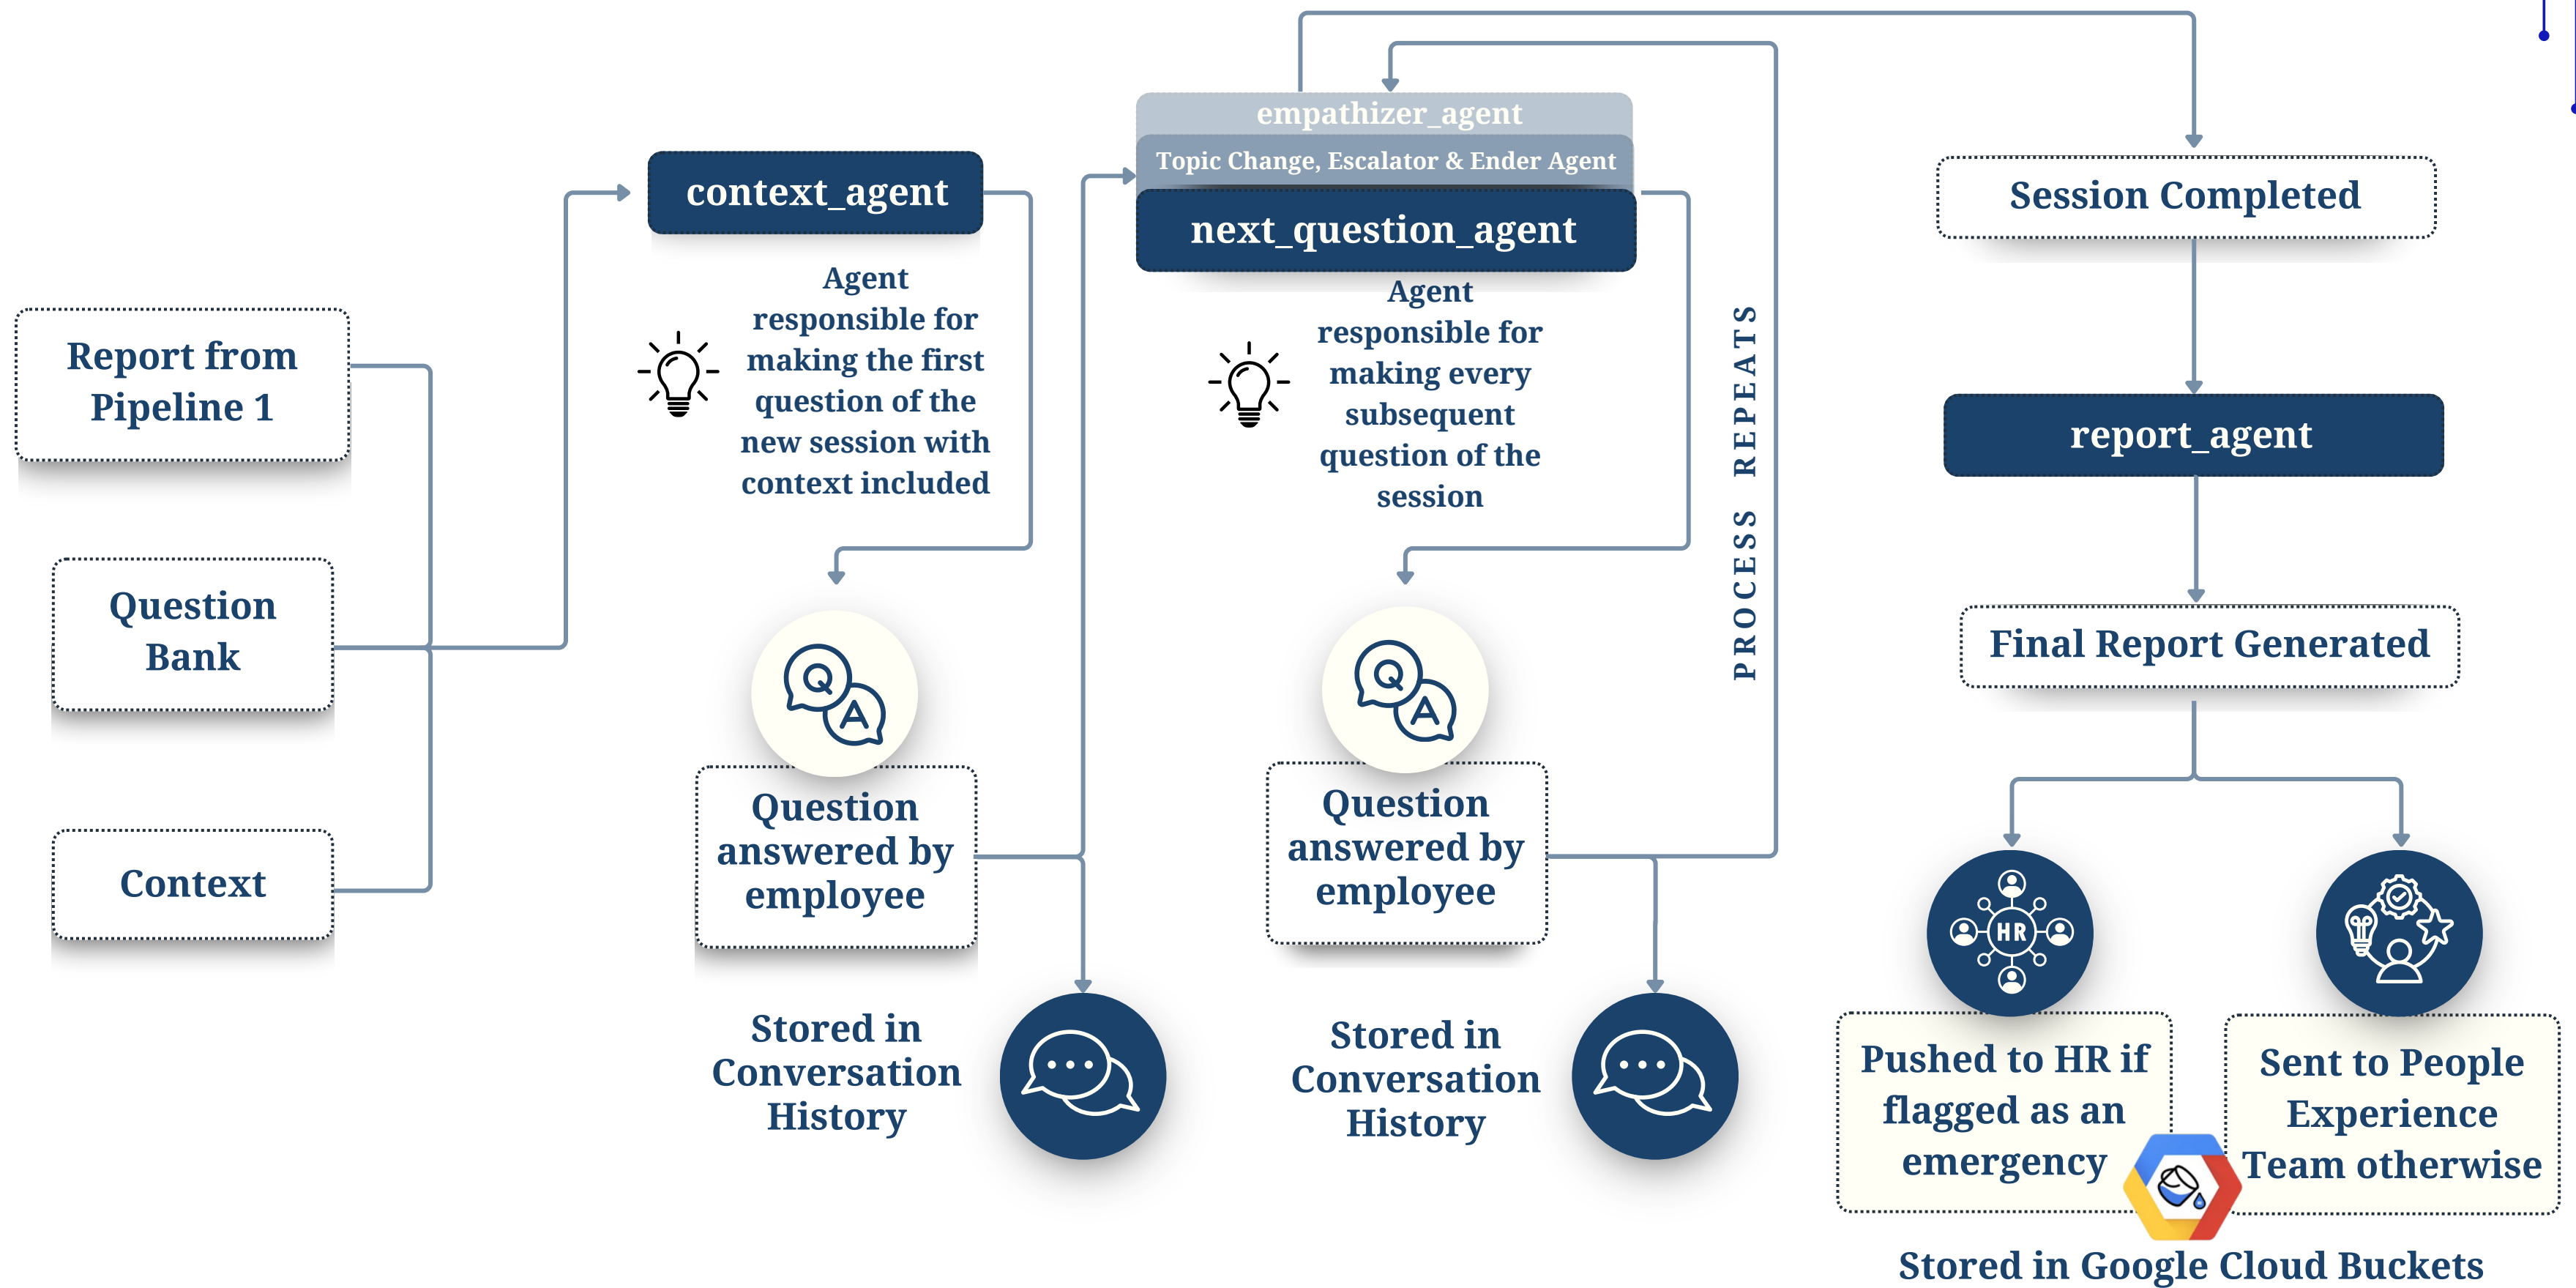

PIPELINE 1

PIPELINE 2

PIPELINE 2

**Employee is
notified of
scheduled
chat**

**Employee
logs in to the
dashboard**

**Employee
chats with the
counselor
chatbot**

**Employee can
postpone chat
after a certain
point if they
wish**

**Once the chat is
completed, an
overall report is
made for the
employee. HR is
notified if necessary**

**Manage
employees &
sessions
efficiently.**

**Schedule
and track
meetings
seamlessly**

**Control user
access and
permissions.**

**View reports,
stats, and
insights.**

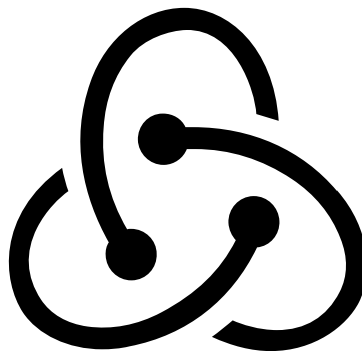

**Monitor real-
time chat
and history.**
